AI compliance & operating memory for Malaysia's registered societies and NGOs

MAIC Nexus Challenge 2026 ·
T5 — AI for Public Services & Smart Cities

Volunteer-run societies, paper-run records

- The secretary is a volunteer. The treasurer is a volunteer.
- Their records: handwritten meeting notes mixing Malay, Chinese and English; paper donation ledgers; a constitution nobody has opened in years.
- Their obligations are real: eROSES Annual Returns, AGM documentation, auditable donation records — and now e-Invois.
- Miss them: deregistration risk, lost donor trust, money that cannot survive an audit.

90,224

active registered societies (JPPM, July 2026)
— every one must file, most run on paper

3 languages

one handwritten page can mix Malay, Chinese and English — no form-based software survives this

Two compliance waves, one technology shift

1

e-Invois reaches everyone

Since 1 Jan 2026, e-Invois reaches organisations above RM1M annual income — and every transaction above RM10,000 now requires an individual e-invoice. These obligations land on volunteer treasurers with paper ledgers.

2

Digital filings, paper sources

eROSES made the Annual Return digital — but the source records are still handwritten. The gap between the form and the shoebox is where societies fail.

3

AI can finally read the shoebox

Vision-language models now read handwritten, mixed-language documents reliably enough to draft from — with humans confirming every fact.

AI drafts everything, humans confirm

Photograph

meeting notes, donation ledgers,
the constitution — as they are

AI drafts everything

BM minutes · eROSES paste-pack
· numbered receipts · AGM pack ·
clause-cited answers

Human confirms

one tap per fact — the only job
the volunteer has

Our one rule: the work moves from AI to human — never human to AI.

Built to read the page as it actually is

- 1 Photograph a real handwritten note written in three languages.
- 2 Minit reads it and colours each fact: green = sure, amber = please check, red = missing.
- 3 It writes the meeting minutes in Malay, ready to file.
- 4 It fills the yearly filing pack — and shows where each fact came from.

When the AI is not sure, it says so — it never fills the gap with a guess. Accuracy on genuinely handwritten, mixed-language pages is being measured against human-verified answers; the figure ships with our artifact before judging.

Built for auditors, not for demos

The AI never invents

Every extracted field carries its source region on the photo and a confidence rating. Not in the document = marked missing — never guessed.

Money is code, not AI

Receipt numbering (sequential, gap-free), register totals, cash custody and e-Invois consolidation: deterministic TypeScript covered by 291 passing unit tests. The AI only reads; it never calculates.

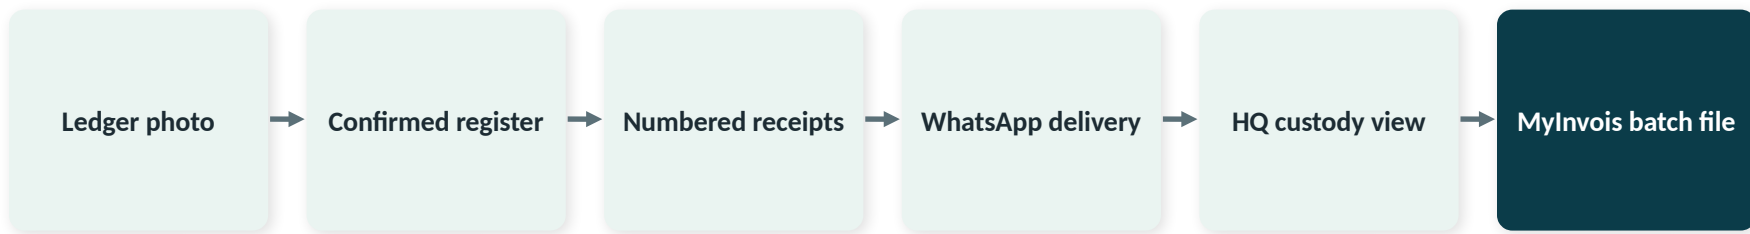

Humans confirm everything

No document exists without a named person approving it:
“Drafted by Minit, confirmed by Khor Jia Yi on 15.07.2026.”

PDPA by design

Donor data masked by default • document contents never logged • per-organisation scoping • full delete removes rows and files.

From a cash donation box to an LHDN-ready file

Custody is where the money leaks: cash passes through several pairs of hands before it reaches HQ. Minit gives every donation a state — collected → pending remittance → settled — and surfaces the balance that has not yet reached HQ. Built for networks of 20 or more branches.

A big market that must follow the rules

The market

- 90,224 active registered societies (JPPM, Jul 2026). Every one files every year, most collect donations, and many have branches.
- We start with temple, mosque and church networks — the most documents and the most cash to track.
- Later, the same tool works for every kind of society.

How we get paid

- Priced by volume, not by org type: RM 39 / month (small society), RM 99 (active), RM 188 (high-volume branch).
- Networks add a RM 150 HQ account: consolidated custody, cross-branch reporting.
- Modelled, not measured: RM 19.56 cost per organisation / month — 73.4% gross margin.
- Audit and secretariat firms resell Minit; one-time setup fee per group.

“Every society in Malaysia deserves a compliant paper trail — without a full-time clerk.”

Governance and auditability for the charity sector · PDPA by design · compliance inclusion for volunteers who don't work in English — civic tech, exactly where eROSES and e-Invois are pushing.
